

The following is a sample of what an informed consent for the COVID-19 vaccines should look like :

The COVID-19 vaccines are experimental and only authorized under an Emergency Use Authorization. This means that this particular vaccine has not been fully studied and we cannot be certain of all of the impacts it could have on you.

Risks of the COVID vaccination include but are not limited to: death, failure to prevent the disease being vaccinated against, risk of anaphylaxis, irritation at the injection site, muscle soreness, tingling in the hand and/ or arm, bleeding from the injection site, other bleeding that may be life-threatening such as brain hemorrhage, internal bleeding, bleeding into the eye, gastrointestinal bleeding, neurologic complications including paralysis that may or may not completely resolve, focal paralysis such as Bell's palsy, transverse myelitis, Amyotrophic Lateral Sclerosis (Lou Gehrig's disease), headaches, dizziness, narcolepsy (inability to remain awake), thrombocytopenia (lack of platelets that prevent bleeding, pancytopenia (lack of all blood elements such as red and white blood cells, infection, miscarriage, blood clots, etc.

Additionally, problems may arise even years after vaccinations. These issues may include "immune enhancement" in which case the vaccination may cause increased risk of severe or fatal worsening of COVID or other similar diseases and influenza like illnesses. Also, the risk of infertility, birth defects, and cancer is unknown, and late onset of neurologic disorders, autoimmune disease.

There have been reports of passage of the vaccine in breast milk that caused fatal bleeding in a nursing baby. The benefit of this vaccination is an overall absolute risk reduction of negative outcomes of approximately 1% and the potential to have lesser severity of symptoms if you do catch COVID-19 (which may still happen).

Please sign here if you consent to this injection.
